Campus Automation Partner

Employee Onboarding **Handbook.**

Your guide to the people, portals and daily practices that keep our work moving.

DOCUMENT	OWNER
Employee Onboarding Handbook	TED

Internal use only. This handbook contains company-confidential information and is not to be shared outside Okie Dokie Solutions.

Welcome to Okie Dokie

Welcome aboard. You have joined a team that builds and runs campus automation software for educational institutions across India — and the work you do here reaches students, faculty and administrators every single day.

The first few weeks in any new company involve a lot of small unknowns: which portal do I use for what, who do I contact when something breaks, where do I log my day. This handbook exists to answer those questions in one place so you can spend your energy on the actual work.

Read it end to end during your first week, then keep it bookmarked. It covers the systems you will use daily, the teams that support you, the reporting rhythm we follow, and the standards we hold each other to.

If something here is unclear, out of date, or missing, tell HR. This document is maintained, and feedback from new joiners is the main reason it improves.

Human Resources

Okie Dokie Solutions · Sector 63, Noida

1.Zoho People — HR Portal

The single portal for attendance, leave, policies, reimbursements and travel.

Zoho People is the company's Human Resource Management System. Almost every HR interaction you have — from marking attendance to claiming an expense — begins here rather than over email or chat.

LINK [Zoho People — Home](#)

1.1 Company Policies

All company policies, guidelines and standard operating procedures are published in the policy library. This includes leave, attendance, code of conduct, travel, IT usage and grievance policies.

- Read the policies relevant to your role during your first week.
- Policies are updated periodically — always refer to the portal version rather than a downloaded copy.

LINK [Company Policy Library](#)

1.2 Attendance

Attendance is marked and reviewed in Zoho People. Daily attendance feeds payroll, leave balances and compliance reporting, so accuracy matters.

- Mark attendance every working day, including days spent at client sites or working remotely where permitted.
- Inform your reporting manager in advance of any planned absence, in addition to applying through the portal.
- Working hours, shift timings and remote-work eligibility are role and location dependent — [confirm with HR].

LINK [Attendance and My Space](#)

1.3 Leave

Leave is applied for, approved and tracked in Zoho People. Applying in the portal is what makes leave official — a message to your manager is a courtesy, not an application.

- Apply for planned leave in advance so your manager can plan cover.
 - For unplanned or sick leave, inform your manager at the start of the day.
 - Check your available balance before applying; leave types, entitlements and carry-forward rules are defined in the leave policy.
-

1.4 Reimbursement Requests

Eligible travel expenses are claimed through the reimbursement module. Claims without supporting documentation cannot be processed.

- Submit claims with valid receipts or invoices attached — legible scans or photographs are acceptable.
- Categorise each expense correctly.
- Eligible expense categories and per-category limits are defined in the reimbursement policy.

LINK [Submit a Reimbursement Request](#)

1.5 Travel Requests

Official travel — client visits, implementations, training and events — is logged through the travel module before the travel takes place.

- Raise the travel request before you travel, not after. Post-facto requests complicate approval and reimbursement.
 - Include purpose, destination, dates.
 - Coordinate with your manager regarding cab booking.
 - Log meeting outcomes from the trip in the MoM Utility on the same day.
-

2. Asana — Work and Task Management

Where work is assigned, tracked, documented and reported.

Asana is the organization's project and task management platform. It holds your assigned work, team projects, standard operating procedures and the daily reporting. If work is not visible in Asana, it is effectively invisible to the rest of the organization.

LINK [Asana — Home](#)

2.1 Important Documents and Formats

The Important Documents project is the internal library for SOPs, templates, formats and reference material. Check here before asking around for a document or recreating one from scratch.

- Standard operating procedures for recurring processes
- Approved templates and document formats
- Internal reference material and process guides

LINK [Important Documents and Formats](#)

2.2 Daily Task Management

Your working day should begin and end in Asana — start with what is assigned to you, close with statuses and notes updated.

- Review tasks assigned to you at the start of each day.
- Update task status as work progresses rather than in a single end-of-week sweep.
- Use comments to collaborate in context, so decisions stay attached to the work.

5.3 Working Conventions

CONVENTION	WHAT IT MEANS IN PRACTICE
Clear task titles	"Prepare fee reconciliation report for XYZ College", not "Report"
Every task has a due date	A task without a date cannot be prioritized or chased
One owner per task	Shared ownership means nobody owns it; use collaborators for everyone else
Status reflects reality	Update the moment something moves, is blocked, or is done
Blockers are raised, not absorbed	Comment on the task and tag the person if you need help on same day

3. Internal Utilities

Two in-house tools you will use regularly.

3.1 MoM Utility — Minutes of Meeting

The MoM Utility records and maintains client meeting details for documentation, follow-up and continuity. It is the reason a colleague can pick up a client relationship without re-asking questions that were answered three months ago.

What it is used for

- Documenting client discussions and the decisions taken
- Recording action items with clear owners
- Uploading client visit selfies as visit evidence
- Maintaining a searchable history of meetings per client

How to use it well

- Record the minutes on the same day as the meeting, while detail is still fresh.
- Capture decisions and commitments, not a transcript — what was agreed, by whom, by when.
- Write action items so that someone outside the meeting could execute them.
- Note any commercial, scope or timeline commitment explicitly, and inform your manager.

LINK [MoM Utility](#)

3.2 Cab Utility

The Cab Utility is used to request and manage official transportation for client-related travel.

What it is used for

- Requesting transportation for client visits

How to use it well

- Raise requests in advance wherever the trip is known — same-day requests may not be fulfilled.
- Provide accurate pickup, drop and timing details so the request can be actioned without follow-up.

LINK [Cab Utility](#)

4. Daily Reporting Protocol

The single most important operational habit at Okie Dokie.

All client interactions and internal support activities must be recorded on the same working day. This data drives effort tracking, capacity planning, client reporting and account health reviews.

The rule Log it the same working day. Not the next morning, not at the end of the week.

4.1 Client Calls and Meetings

Every client-facing interaction is logged through the Client Calls and Meetings form — calls, video meetings, on-site visits and scheduled reviews all count.

- Log every client call and meeting, however brief.
- Record the interaction type and the hours spent accurately.
- Capture the client, the participants and the purpose of the interaction.
- Submit the entry on the same working day.

LINK [Client Calls / Meetings Form](#)

4.2 Internal Meetings and Team Support

Internal coordination is real effort and is tracked the same way. Time spent supporting another team, attending internal meetings or coordinating across functions belongs here.

- Log all internal meetings and coordination activities.
- Record support hours provided to other teams or functions.
- Submit entries on the same day.

LINK [Internal Meetings and Team Support Form](#)

4.3 Which form do I use?

SITUATION	FORM
Call, meeting or visit with a client	Client Calls and Meetings
Internal review or planning session	Internal Meetings and Team Support
Helping another internal team with their work	Internal Meetings and Team Support
Client meeting where minutes and decisions were taken	Client Calls and Meetings, plus a MoM Utility entry
Focused individual work with no meeting involved	No form — track through your Asana task status

5. Who to Contact

Route your request to the right team the first time.

Sending a request to the wrong channel is the most common cause of slow resolution. Use the table below to identify the owning team, then read the detail underneath for how to frame the request.

IF YOU NEED...	CONTACT	HOW
A product bug fixed, feature request raised or data correction	PEX Team	Add a task in PEX Project on Asana
Help with a personal or professional query	TED	Mail to: ted@okiedokiepay.com
A website change, internal utility or PDF template update	Website and PDF Templates Team	Add a task in Client Website Tasks
Attendance, leave, payroll, policy or reimbursement help	TED	Mail to: ted@okiedokiepay.com
Laptop, email, account or access issues	TED	Mail to: ted@okiedokiepay.com
Clarity on priorities, scope or escalation to a client	Your reporting manager	Directly, same day

5.1 PEX Team

The PEX Team handles product-related requests and issue management. Reach out to them for:

- Bug reporting
- New feature requests
- Enhancement requests
- Product improvement suggestions
- Data correction

5.2 TED

TED provides support for employee-related personal and professional queries. If you are unsure whether something is an HR matter, a manager matter or something you should not have to handle alone, TED is a safe first stop.

Mail ted@okiedokiepay.com

5.3 Website and PDF Templates Team

This team develops and maintains internal utilities, websites and PDF templates. Reach out to them for:

- Internal utility development
- Website modifications
- PDF template creation and updates

Raising a good template request

- Attach the current template and mark exactly what should change.
- State the deadline and what it is tied to, so the request can be prioritized sensibly.

5.4 Escalation

If a request has not moved within the expected timeframe, escalate through your reporting manager rather than re-sending the same request through multiple channels. Duplicate requests across channels slow everyone down, including you.
